

Diagrammatic equation showing the addition of angular momentum states:

$$\begin{array}{c}
 \begin{array}{c} \square R \\ \square \\ \square \\ \square \\ \square \\ \square \end{array} \\
 \begin{array}{c} \nearrow \\ \searrow \end{array} \\
 \begin{array}{c} jm \\ j'm' \end{array}
 \end{array}
 =
 \begin{array}{c}
 \begin{array}{c} \nearrow \\ \searrow \end{array} \\
 \begin{array}{c} \square \\ \square \\ \square \\ \square \\ \square R \end{array} \\
 \begin{array}{c} jm \\ j'm' \end{array}
 \end{array}$$

The diagram illustrates the addition of angular momentum states. On the left, a vertical column of five squares is labeled R at the top. Below the column, two arrows branch out: one pointing up and to the left, labeled jm , and one pointing down and to the right, labeled $j'm'$. A minus sign is positioned below the branching point. This is equal to the right-hand side, which shows a similar branching structure. Here, the vertical column of five squares is labeled R at the bottom. The two branching arrows are labeled jm (up and left) and $j'm'$ (up and right). A plus sign is positioned above the branching point.
