

Diagrammatic equation showing the decomposition of a multi-line interaction between two blocks $\mathfrak{M}$ and $\mathfrak{N}$.

Left side: A block $\mathfrak{M}$ on the left and a block $\mathfrak{N}$ on the right. Five horizontal lines connect them, labeled j_1, j_2, j_3, j_4, j_5 from top to bottom, with arrows pointing from $\mathfrak{M}$ to $\mathfrak{N}$.

Right side: The sum of two terms, separated by an equals sign.

Term 1 (plus sign): A block $\mathfrak{M}$ on the left and a block $\mathfrak{N}$ on the right. Five horizontal lines connect them, labeled j_1, j_2, j_3, j_4, j_5 from top to bottom, with arrows pointing from $\mathfrak{M}$ to $\mathfrak{N}$. A vertical line segment connects the top and bottom of the lines j_2 and j_4 . The top vertex is labeled J_{12} and the bottom vertex is labeled J_{45} .

Term 2 (minus sign): A block $\mathfrak{M}$ on the left and a block $\mathfrak{N}$ on the right. Five horizontal lines connect them, labeled j_1, j_2, j_3, j_4, j_5 from top to bottom, with arrows pointing from $\mathfrak{M}$ to $\mathfrak{N}$. A vertical line segment connects the top and bottom of the lines j_2 and j_4 . The top vertex is labeled J_{12} and the bottom vertex is labeled J_{45} . The arrows on the vertical line segment point from $\mathfrak{N}$ to $\mathfrak{M}$.
