

Diagrammatic equation showing the addition of a vertical line to a vertex in a Feynman diagram.

Left side: A vertex (black dot) is connected to three external lines: a solid line with arrow pointing up labeled $j_3 m_3$, a solid line with arrow pointing down-left labeled $j_1 m_1$, and a solid line with arrow pointing down-right labeled $j_2 m_2$. A dashed line labeled R_1 connects the vertex to the $j_1 m_1$ line. A dashed line labeled R_2 connects the vertex to the $j_2 m_2$ line. A dashed line labeled R_3 connects the vertex to the $j_3 m_3$ line. There are plus signs at the vertex and at each of the three connection points.

Right side: The same diagram as the left side, but with an additional vertical solid line with arrow pointing up, labeled $j_3 m_3$, attached to the vertex. This line is connected to the vertex by a dashed line labeled R_3 . There are plus signs at the vertex and at each of the four connection points (the original three plus the new one).

The two diagrams are separated by an equals sign ($=$).
