

The diagram shows an equality between two Feynman diagrams. On the left, a dashed line labeled R_1 is connected to a bubble loop. The bubble has a clockwise arrow labeled J at the top and a counter-clockwise arrow labeled J at the bottom. Inside the bubble, there is a '+' sign on the left and a '-' sign on the right. The bubble is then connected to another dashed line labeled R_2 . This is followed by an equals sign. On the right, a dashed line labeled R_1 is connected to a tadpole loop (a circle with a single vertex), which is then connected to a dashed line labeled R_2 .
