

$$\begin{array}{c}
 \text{Diagram 1: A horizontal line labeled } a\alpha \text{ enters a vertex from the left. From this vertex, two lines branch out: an upper line labeled } u \text{ and a lower line labeled } v. \text{ These lines enter a square box. The top edge of the box is labeled } p, \text{ the bottom edge is labeled } r, \text{ and the right edge is labeled } t. \text{ Inside the box, the two diagonal lines intersect. The upper-left triangular region is labeled } q, \text{ and the lower-right triangular region is labeled } s. \\
 \\
 \text{Diagram 2: A horizontal line labeled } a\alpha \text{ enters a vertex from the left, which is represented by a solid black dot. From this dot, a single line enters a horizontal oval. The top arc of the oval is labeled } u, \text{ and the bottom arc is labeled } v. \\
 \\
 \text{Diagram 3: A square box with edges labeled } p \text{ (top), } r \text{ (bottom), } u \text{ (left), and } t \text{ (right). The two diagonals intersect in the center. The upper-left triangular region is labeled } q, \text{ and the lower-right triangular region is labeled } s.
 \end{array}$$
